Additionally, the course information will be posted to Blackboard (THECB 60x30TX compliance).

Course Description:
This course is a study of the application of common algebraic functions, including polynomial, exponential, logarithmic, and rational, to problems in business, economics, and the social sciences are addressed. The applications include mathematics of finance, including simple and compound interest and annuities; systems of linear equations; matrices; linear programming; and probability, including expected value. (The content level of MATH 1324 is expected to be at or above the level of MATH 1314-College Algebra.)

Semester Hours Credit: 3

Lecture/Lab Hours: 3/0

Prerequisite: A score of 350 or higher on the Texas Success Initiative(TSI) assessment, or satisfied any TSI Assessment Exemption. Students are responsible for reading and following all college course prerequisites to ensure

Learning Innovation Excellence Leadership Diversity Respect Service Integrity Collaboration Communication

At all times, in all ways, the student is at the heart of all we do.
that they have been met for continued enrollment, otherwise the student must meet with their advisor to drop the course and make immediate and necessary changes to their schedule.

**Internet Access:** (Required)  Students are responsible for completing all assignments in MyMathLab, which requires an internet service provider that is compatible with MyMathLab. Students may use campus computer labs as needed, in order to meet the MyMathLab assignment deadlines, but the student’s personal computer/laptop with home Internet access will be the primary means that is required for continuing in this course.

**Calculator:** (Required)  TI-83/84 Plus Scientific Graphing Calculator. (No other graphing calculators allowed.)

**Student Learning Outcomes:**
Upon successful completion of this course, students will:

1. Apply elementary functions, including linear, quadratic, polynomial, rational, logarithmic, and exponential functions to solving real-world problems.
2. Solve mathematics of finance problems, including computation of interest, annuities, and amortization of loans.
3. Apply basic matrix operations, including linear programming methods, to solve application problems.
4. Demonstrate fundamental probability techniques and application of those techniques, including expected value, to solve problems.
5. Apply matrix skills and probability analyses to model applications to solve real-world problems.
